Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Statistics: Mean 9.195; Variance 5.326; scale 1.727

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Simil 25;	Q24441. This derivative lacks the 81 carboxyl terminal residues of the cytoplasmic domain. The derivative could be used in the regulation of TNF-alpha mediated responses by binding and sequestering human TNF-alpha e.g. in the treatment of pulmonary diseases, septic shock, HIV infection, malaria, viral meningitis, graft versus host disease and autoimmune diseases, esp. rheumatoid arthritis.  See also Q24440-51, R24000, R24080-84, R27585, Q29236-8 Sequence 608 BP; 148 A; 159 C; 165 G; 136 T;	WPI; 92-167156/20.  WPI; 92-167156/20.  WPPSDB; R24080.  New polypeptide capable of binding human TNF alpha - comprises first three cysteine-rich subdomains of TNF alpha receptor for treating autoimmune disease, septic shock, HIV etc.  Example; Fig 7: 43pp; English.  This sequence encodes the designed TNF-alpha 55kD receptor derivative, as present in pTNFRecd. This was produced as described the designed TNF alpha 55kD receptor derivative, as present in pTNFRecd.	malaria; viral meningits; graft versus host disease; autoimmune disease; rheumatoid arthritis.                                 DNA encoding TNF binding protein and TNF- receptor - used in the tumour treatment and to understand mechanismsm to TNF action Disclosure; Fig 1(1-3); 51pp; German.

CD pINF-BPL5 is one of 30 positives clones in a screened cDNA library from induced TNF-induced fibrosarcoma cells. A TNF-BP had been isolated from the urine of patients with uraemia and probes/primers were constructed from the determined amino acid sequence.

To produce a vector expressing a soluble form of TNF-binding protein, this plasmid was cut with XmmI, amplified by PCR and the amplified DNA cut with BamHI and EcoRI.

CThe resulting 0.75 kb DNA fragment was inserted into pT7/T3 alpha-19 with BamHI and EcoRI, and the recover pTNF-BP. This was cut with BamHI and EcoRI, and the recovered fragment inserted into PAD-CMY1 (OBG283) to give the required plasmid pADTNF-BP.

See also Q06283-1 to give the required plasmid pADTNF-BP.

New fusion protein tumour necrosis factor and human interleukin-1 receptor - useful in therapy, diagnosis and assays of e.g. rheumatoid arthritis, diabetes, cerebral malaria, sepsis, etc. Disclosure; Page 57-59; 85pp; English.

The sequences given in Q49931-32 encode human tumour necrosis fact receptor (TWF-R) and the sequences in Q49933-34 encode human interleukin-1 receptor (IL-IR). These sequences were used in the production of a fusion protein which conformed to one of the formulae:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Lambda-derived TNF-R cDNA.

These linkers separate the individual moeities by such a distance that each component of the fusion protien is capable of folding into the secondary or tertiary structure required for its biological activity. These fusion proteins may be used in therapy, diagnosis and assays for conditions mediated by TNF or IL-1, particularly in conditions in which both TNF and IL-1 play a causitive role. They may be used to treat cachexia, rheumatoid arthritis, diabetes, multiple sclerosis, pulmonary fibrosis and silicosis, cerebral malaria, allograft and xenograft rejection in graft verses host disease, sepsis, septic shock, inflammation, allergies and autoimmune dysfunctions.

FI first three cysteine-rich subdomains of TNF alpha receptor for treating autoimmune disease, septic shock, HIV etc.

PS Claim 4: Fig 1: 43pp; English.

CC This sequence encodes human TNF-alpha 55kD receptor . A placenta cDNA control of the problem of the control of the control of the problem of the problem of the hybridising clones control of the control of the control of the human TNF-alpha clones were plaque purified and cDNA size determined by PAGE against an control of the colones were then come the coding region of the majority of the human TNF-alpha control of the coding sequenced. The coding region of the majority of the human TNF-alpha control of the coding sequenced as an ECORI fragment encoding 374 amino acids, and cloned into a mammalian cell expression vector, resulting in pringra. A derivative of the TNF-alpha receptor was produced by compinering a termination codon just prior to the transmembrane compinering a termination codon just prior to the transmembrane compinering a termination codon just prior to the transmembrane compinering at the primers Q29237, 8 generated a 300bp pringraced.

CC TNA sequencing confirmed this contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained the designed DNA sequence. The TNF-alpha receptor expression plasmids were then transfected contained the designed DNA sequence. The TNF-

Disclosure; Fig 1; 25pp; English.
The sequence is that of DNA encoding tumour necrosis factor alpha binding protein which was obtd. from a human placental cDNA library in lambda gtil using a probe (Q20974). The DNA also encodes the extracellular domain of human TNF alpha receptor and as such it is useful for treating diseases where TNF alpha is involved as a causative agent, e.g. cachexia, sepsis and autoimmune diseases, specifically rheumatoid arthritis. See also Q20974.

Disclosure: Fig 21: 142pp: English.

The sequence encodes the entire 30 kD TNF inhibitor. The clone from which the sequence was obtd. was isolated from a CDNA library prepd. from RNA form U937 cells treated with PNA/PNA. The whole gene can be inserted into expression vectors for prepn. of TNF inhibitor for use in the treatment of inflammatory and degenerative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Partial amino acid sequences were determined for the 55 and 75kD TWR-BPS (see R11072-R11081) and oligonucleotide primers were synthesised based on these partial sequences. The primers were used to produce a cDNA fragment for use as aprobe to screen a human placental cDNA bank constructed in lambda gtll. Positive clones were identifed and sequenced. DNA constructs comprising the TNF-BP coding sequence may also contain a fragment encoding a human Ig domain. Recombinant constructs are used to transform cells to confer improved TNF-binding properties.

antagonising deleterious errors.

Disclosure; Fig 1: 40pp; English.

CC This sequence represents human p55 tumour necrosis factor (TNF-R) DNA.

CC Expression of this receptor is regulated by shedding of the extracellular receptor fragment. The p55 TNF-R can be shed in response to different inducing agents, e.g. phorbol myristate acetate (PMA), depending on cell type. The only region of the receptor whose structure affects the conducing agents, e.g. phorbol myristate acetate (PMA), depending on cell type. The only region of the receptor whose structure affects the conducing agents, e.g. phorbol myristate acetate (PMA), depending on cell type. The only region of the receptor whose structure affects the conducing agents. The spacer region is located close to a site of cleavage of the molecule, and links the Cys rich module to the transmembrane domain. The spacer region of the encoded protein was used to create the chimeras between human p55 TNF-R and murine epidermal growth factor receptor (EGF-R) that are represented by R75007-11. This spacer region was subjected to deletion mutations (R75013-25) and substitutions are the subject of the spacer region, the most important residues are caption of these. The shedding of the receptor is independent of the side chain identity of these residues, with the exception of a limited conformation of the protein adversely effect the shedding process. The mutations shown in R75013-47 were introduced in order to create an inhibitor of a protease that is capable of cleaving the soluble TNF-R creaments of these inhibitors can be seen in be used for enhancing TNF function.

A dicistronic vector (T15930) comprises a regulatory region derived from the cytomegalovirus immediate-early gene, a selectable dihydrofolate reductase gene positioned within an intron having a 5' wild-type ras splice donor site, a downstream sequence coding for an immunoadhesin, Ther-ig, capable of binding tumour necrosis factor, and a poly-A sequence. Transfection of CHO DHFR- cells and subsequent methotrexate amplification and growth of the cells in nutrient-rich medium gave Ther-ig in yields of 9.5
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      T15931;

                                                                                                                                                                                                                disease, septic shock, etc.

Claim 2: Figure 1: 17pp: English.

Modification of the tumour necrosis factor receptor by mutation or delation modulates signal transduction and/or cleavage effected by the receptor. This modulation of activity can also be achieved using effector proteins which interact with the TWF receptor.

Molecules which interact with the TWF receptor or the effector proteins can be used to treat or prevent diseases associated with TWF activity e.g. autoimmune disease; rheumatoid arthritis; graft rejection; graft vs. host disease or septic shock. They can also be used to treat overdoses of exogenous TWF.

The Tumour Necrosis Factor Binding Protein I is the soluble form of the Tumour Necrosis Factor Binding Protein I is the cell surface form of this receptor, corresp. to its extracellular domain. There is no characteristic poly(A) addition signal near the 3' end of the cDNA. The sequence ACTARA (tag m) may serve as an alternative to this signal, but with low efficiency. See also Q12212-15.

Example 3: Fig 4a; 94pp; English.

The sequence is an analogue of hCG beta subunit cDNA contg. two silent mutations which eliminate restriction sites. It was prepd. from the plasmid pxMB-hCG-beta, a construct contg. the hCG beta subunit isolated from human placenta (Fiddes and Goodman) in plasmid pxMB, a derivative of pUC18 designed to facilitate cloning of glycoprotein hormones. The sequence was used as the starting construct for many mutants. (See R15061-R15125 and R15161-R15198). Sequence 579 BP; 128 A; 205 C; 151 G; 95 T;

                                                                                                                                                                                                                 P-PSDB; R86259.39.

Whethods for altering fertility in mammals, esp. humans - e.g. restinuiating fertility by reducing the activity and/or levels of circulating glyco:protein hormones having lutropin activity producing the activity and/or levels of circulating glyco:protein hormones having lutropin activity producing glyco:protein hormones having lutropin activity produced in the second control of the single chain gonadotroph having a chorionic gonadotropin (CG) beta-subunit at the N-terminus and a CG alpha-subunit at the C-terminus, joined by a linker of 1-16 amino acids. The analogue la was derived from analogue 1 by removing the two glycosylation sites from the alpha-subunit. The analogue has anti-luteinising hormone (lutropin) activity and can be used for facilitating ovulation, terminating pregnancy and reducing androgen secretion. The present sequence codes for analogue 1a.

Statistics: Mean 11.212; Variance 2.135; scale 5.252

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
